

## High-tech Care for Sensitive Cargo

Lumikko recently attended the logistics-transport tradeshow “Logistiikka-Kuljetus 2015” in Helsinki, Finland. Slide through our pic gallery and get to know BITZER Group’s specialist for cargo space temperature control units and its highly innovative products!

For the team of Lumikko attending the “Logistiikka-Kuljetus 2015” was a home match. Both the headquarter and the production of Lumikko Technologies Oy are located in Finland, too: just about 320 kilometers (223 miles) north of Helsinki, in Seinäjoki.

Pic 2

One of the highlights showcased on the Lumikko booth was the L5 temperature control unit. It is ideal for long-distance transportation and deliveries in urban areas. Its design is highly beneficial: The

unit does not take up space in the cargo area. So, the entire cargo space can be utilized. Like all other Lumikko products, the L5 features BITZER technology: an ECOLINE 4CESH-6Y-40S reciprocating compressor, specially developed for transport applications.

Get more information about the L5 on: <http://goo.gl/IUnBOR>

Another Lumikko product on display was the Temperature control unit L7. This diesel-powered truck solution boasts both cost-effectiveness and energy-efficiency as well as a reduced environmental load. Of course, the “Heart of Freshness” beating inside of the L7 is made by BITZER: It’s a 4NFT-Y reciprocating compressor from the proven BITZER ROADSTAR family.

The L4 premiered at the “Logistiikka-Kuljetus 2015”. This all-new cargo space temperature control unit features a completely new BITZER 4EET-6Y-40S compressor and is fully equipped including the

evaporator. Despite its comprehensive equipment, the L4 is much lighter than any other comparable unit: It weighs just 400kg (882lb)!

Pic 5

Lumikko Sales and Marketing Director Jani Leppänen (middle) explains to journalists the technical features of the L4 unit.
